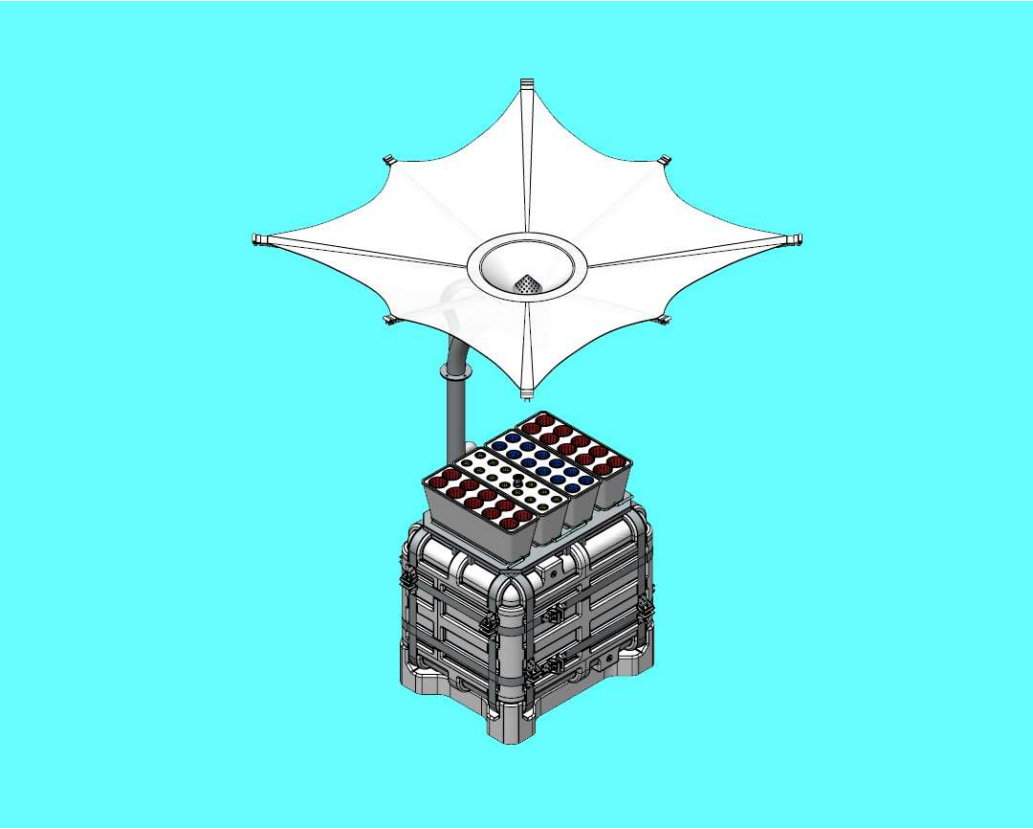
Small Rainwater Collection + Hydroponic Garden

Many people would like to have a backyard garden, and even more would like to have a system to collect and store rainwater. Now, WHT brings them both together in an elegant, efficient and affordable system.

Introducing the Small Rainwater Collection + Hydroponic Garden.



WHAT IS IT?

This is a device to collect and store 200 gallons of rainwater in your backyard or other outdoor space. This freestanding unit collects and stores 200 gallons of rainwater and grows up to 50 food plants at a time in a small 7’ square footprint. Set it and forget it. You enjoy a steady supply fresh organic greens, veggies, herbs and fruit - without

What makes our unit unique is:

- Ships in boxes that meet UPS shipping requirements. INCLUDING the water tank!
- All pieces snap together easily at home.
- The water is captured in the clear plastic funnel and routed into the tank.
- Water is pumped into the hydroponic growing units by a solar-powered pump.
- Plants are automatically watered using non-electronic control systems.

Note that the water is NOT potable and is strictly for hydroponic growing, watering a conventional garden, watering your lawn and shrubbery, washing your car or sidewalk, etc.

Our patented water storage tanks ship as nested pieces in a box. They feature uniquely-designed components that make the tank extremely water-tight and able to hold water safely for great lengths of time.

The growing unit uses the “Kratky System” of non-circulating hydroponics. Go on a trip for weeks at a time and your plants will be fine when you get home: no need to pester your friends or neighbors to water them. You can grow a wide range of vegetables, herbs and even fruit such as strawberries. It’s the easy and simple way to enjoy fresh

organic food whenever you want – served extremely fresh at maximum levels of nutrition - without the high cost of the grocery store!

WHERE CAN I BUY?

The unit will go to prototype in 2026 and be available at Home centers across America in 2027 or 2028. Interested investors and / or manufacturers can contact us for details.
